Week02 – MCS51: Assembly for MCS-51, ESP32: Arduino Library
PC ____ รหัส _____ ชื่อ-สกุล _____

1. ETT-8052 Board: ป้อนโปรแกรมด้วยมือ + Run Single Step

- จากเอกสาร "PartA2-MicroP_All Lab01-08.pdf" หน้า 4 ตอนที่ 2
- จากโปรแกรม "90 E0 60 74 00 F0 74 FF F0 02 80 00" กำหนดให้โปรแกรมเริ่มทำงานที่ Address 8000H ให้ทำการแปลง Hex Code ให้เป็น Mnemonics Code บันทึกค่าในตาราง
- ปรับให้ทำงาน เพื่อแสดงค่า 0-F ที่ 7Segment 0E060H พร้อมทั้งทดสอบการทำงาน

Address	+0	+1	+2	Mnemonics Code	Operator, Operand	Comment
8000H	90	E0	60	MOV	DPTR, #0E060H	ให้ DPTR มีค่าเท่ากับ E060H
8003H	74					

2. ETT-8052 Board: ป้อมโปรแกรมผ่าน Serial Command + Single Step Run

- จงแปลงชุดคำสั่งแอสเซมบลีตอไปนี้ใหเปนภาษาเครื่องดวยการเปดตารางรหัสคำสั่ง
- ทดสอบด้วยการป้อน Hex Code ผ่าน Serial Terminal
- รันโปรแกรมแบบ Single Step เพื่อบันทึกค่า Register ต่างๆ ทีละ Step จากการรัน

	Addr.	+0	+1	+2	Description	PC	A	B	PSW	R5	R7
ORG 8000H					บันทึกค่าก่อนรัน	8000					
MOV R5, #25H	8000	7D	25		ให้ R5 มีค่าเป็น 25H	8002					
MOV R7, #34	8002										
MOV A, #0H											
ADD A, R5											
ADDC A, R7											
ADDC A, #12H											
MOV B, #0C3H											
SUBB A, B											
SJMP $		80	FE								
END											

MCS51: Show 0-F	MCS51: Show-Reg	MCS51: Blink ID	DHT22 + MAX7219	BH1705+TM1638

3. ETT-8052 Board: ป้อมโปรแกรมผ่าน Serial Command + GO Command Run
   - จาก “PartA2-MicroP_All Lab01-08.pdf” หน้า 10
   - ให้ทดสอบโปรแกรม Test3.Asm หน้า 18
   - ปรับโปรแกรมให้แสดงรหัสนักศึกษาที่ละตัวสลับกับดับทั้งหมด ที่ตำแหน่งเซ็กเม้นต์ขวาสุด
   - (Advance) หากอยากแสดงรหัส 6 ตัวท้ายจะปรับแก้โปรแกรมอย่างไร

4. อ่านอุณหภูมิและความชื้นที่จาก DHT22 แล้วแสดงค่าที่ MAX-7219
   - จาก “PartC -- 535203 Internet of Things .pdf” หน้า 96, หน้า 113
   - Install DHT-22 Library และทดสอบโปรแกรมตัวอย่าง
   - Install MAX7219 Library และทดสอบโปรแกรมตัวอย่าง
   - จากโปรแกรมที่ให้มา ปรับให้สามารถแสดงอุณหภูมิและความชื้นได้ (Hint: หน้า 118)

5. อ่านค่าความเข้มแสงจาก BH1750 แล้วแสดงค่าที่ TM-1638
   - Install BH1750 Library และทดสอบโปรแกรมตัวอย่าง
   - Install TM1638 Library และทดสอบโปรแกรมตัวอย่าง
   - จากโปรแกรมที่ให้มา ปรับให้สามารถแสดงความเข้มแสงได้

Mission-4

```
#include "DHTesp.h"
#include "LedController.hpp"
#define Pin_DIN 19 // D19
#define Pin_CS 18 // D18
#define Pin_CLK 5 // D5
#define Pin_DHT22 15 // D15
DHTesp dht;
LedController<1, 1> lc;
void setup() {
  Serial.begin(115200);
  lc = LedController<1, 1> (Pin_DIN, Pin_CLK, Pin_CS);
  lc.setIntensity(8);
  lc.clearMatrix();
  dht.setup(Pin_DHT22, DHTesp::DHT22);
}
void loop() {
  float h = dht.getHumidity();
  float t = dht.getTemperature();
  Serial.print("Temperature: ");        Serial.print(t); Serial.print(" *C\t");
  Serial.print("Humidity: ");           Serial.print(h); Serial.print(" %\n");
  int Tempp2 = 7;        int Tempp1 = 6;        int Tempp0 = 5;
  int Humi2 = 4;         int Humi1 = 3;         int Humi0 = 2;
  lc.setDigit(0, 7, Tempp2, false);
  lc.setDigit(0, 6, Tempp1, true);
  lc.setDigit(0, 5, Tempp0, false);
  lc.setRow(0, 4, B00001101); // Code=tabcdefgh
  lc.setDigit(0, 3, Humi2, false);
  lc.setDigit(0, 2, Humi1, true);
  lc.setDigit(0, 1, Humi0, false);
  lc.setRow(0, 0, B00010111); // Code=tabcdefgh
  delay(2000);
}
```

Mission-5

```
#include <Wire.h>
#include <BH1750.h>
#include <TM1638plus.h>
< ยังไม่สมบูรณ์ >

void setup() {
  Serial.begin(115200);
  < ยังไม่สมบูรณ์ >
}

void loop() {
  float Luxfloat = lightMeter.readLightLevel();
  Serial.print("Light: ");
  Serial.print(Luxfloat);
  Serial.println(" lx");
  int IntLux = (int)(Luxfloat * 100);
  int IntLux4 = IntLux % 10; IntLux /= 10;
  int IntLux3 = IntLux % 10; IntLux /= 10;
  int IntLux2 = IntLux % 10; IntLux /= 10;
  int IntLux1 = IntLux % 10; IntLux /= 10;
  int IntLux0 = IntLux % 10; IntLux /= 10;
  tm.reset();
  IntLux0 = Luxfloat < 100 ? ' ' - 0x30 : IntLux0;
  IntLux1 = Luxfloat < 10  ? ' ' - 0x30 : IntLux1;
  tm.displayASCII(0, 0x30 + IntLux0);
  tm.displayASCII(1, 0x30 + IntLux1);
  tm.displayASCIIwDot(2, 0x30 + IntLux2);
  tm.displayASCII(3, 0x30 + IntLux3);
  tm.displayASCII(4, 0x30 + IntLux4);
  tm.displayASCII(5, ' ');
  tm.displayASCII(6, 'L');
  tm.displayASCII(7, 'u');
  delay(2000);
}
```

Note

1. Mnemonic to HEX Code:

- จงแปลงชุดคำสั่งแอสเซมบลีตอไปนี้ให้เปนภาษาเครื่องดวยการเปดตารางรหัสคำสั่ง
- ทดสอบด้วยการป้อน Hex Code

			Addr.	+0	+1	+2	PC	PSW	A	B	30H	R0	R6	R7
	ORG	8600H					8600							
	MOV	A, #11H	8600											
	MOV	30H, #30D												
	MOV	B, 30H												
	MOV	R0, #11												
	MOV	R6, #66O												
	MOV	R7, #77H												
	ADD	A, R0												
	SUBB	A, R6												
	MOV	R7, B												
DELAY:	DJNZ	R7, DELAY												
	SJMP	$												

2. Hex to Mnemonic Code:

- อ้างอิง “PartA -- MCS51 Code Table.pdf”
- จาก Machine Code ที่ให้มา หากแปลคากลับจะได Assembly Code เปนอยางไร
- กำหนดสวนเริ่มตนโปรแกรมเปน 8000H

5. ESP-32 Add DHT-22 Library

- https://randomnerdtutorials.com/esp32-dht11-dht22-temperature-humidity-sensor-arduino-ide/

DHT sensor Library for ESPx by beegee_tokyo Version 1.19.0

```
#include "DHTesp.h"
#define pinDHT22 15
DHTesp dht;

void setup()
{
 Serial.begin(115200);
 Serial.println();
 String thisBoard = ARDUINO_BOARD;
 Serial.println(thisBoard);
 Serial.println("Status\tHumidity (%)\tTemperature (C)\t(F)\tHeatIndex (C)\t(F)");
 dht.setup(pinDHT22, DHTesp::DHT22);
}

void loop() {
 delay(dht.getMinimumSamplingPeriod());

 float humidity = dht.getHumidity();
 float temperature = dht.getTemperature();

 Serial.print(dht.getStatusString());
 Serial.print("\t");
 Serial.print(humidity, 1);
 Serial.print("\t\t");
 Serial.print(temperature, 1);
 Serial.print("\t\t");
 Serial.print(dht.toFahrenheit(temperature), 1);
 Serial.print("\t\t");
 Serial.print(dht.computeHeatIndex(temperature, humidity, false), 1);
 Serial.print("\t\t");
 Serial.println(dht.computeHeatIndex(dht.toFahrenheit(temperature), humidity, true), 1);
 delay(2000);
}
```

6. ESP-32 Add MAX-7219 Library

LedController

by **Noa Sakurajin** Version **2.0.2** **INSTALLED**

The better LedControl library for the MAX7219 and the MAX7221 Led display drivers. "!!Version 2.0.0 comes with a lot of changes plese check the readme on more information!! It can do everything LedControl can, works with more boards (like esp32) and makes working with LedMatricies easier. You can more your displayed data around, set whole segments and have way more symbols for 7-segment displays. If you still miss a feature just create a pull request and I will do my best to add it ASAP."

More info

LedController by Noa Sakurajin Version 2.0.2

```
#include "LedController.hpp"
#define Pin_DIN 19  // D19
#define Pin_CS 18   // D18
#define Pin_CLK 5   // D5

LedController<1, 1> lc;

void setup() {
  lc = LedController<1, 1>(Pin_DIN, Pin_CLK, Pin_CS);
  lc.setIntensity(8);
  lc.clearMatrix();
}
void loop()
{ lc.setDigit(0, 7, 1, false);
  lc.setDigit(0, 6, 2, false);
  lc.setDigit(0, 5, 3, false);
  lc.setDigit(0, 4, 4, false);
  lc.setDigit(0, 3, 5, false);
  lc.setDigit(0, 2, 6, false);
  lc.setDigit(0, 1, 7, false);
  lc.setDigit(0, 0, 8, false);
  delay(1000);
}
```

7. ESP-32 Add TM-1638 Library

TM1638plus

by **Gavin Lyons** Version **1.9.0** **INSTALLED**

TM1638plus is an Arduino library to control TM1638 seven segment modules. It supports push buttons, LEDs and the decimal pci features of these modules. Can display ASCII, Decimal, Hexadecimal and text strings. Small Memory footprint.

More info

TM1638plus by Gavin Lyons Version 1.9.0

```
#include <TM1638plus.h>
#define  pin_STB 21
#define  pin_CLK 19
#define  pin_DIO 18

TM1638plus tm(pin_STB, pin_CLK , pin_DIO);

void setup() {
  Serial.begin(115200);
  tm.displayBegin();
  tm.brightness(6);
}

void loop() {
  tm.reset();
  tm.displayText("-Arduino");
  delay(2000);

  tm.reset();
  tm.displayASCIIwDot(0, '2');
  tm.displayASCII(1, '3');
  tm.displayASCII(2, '4');
  tm.displayASCII(3, '2');
  delay(2000);

  tm.reset();
  tm.displayHex(0, 0);
  tm.displayHex(1, 1);
  tm.displayHex(2, 2);
  tm.displayHex(3, 3);
  tm.displayHex(4, 4);
  tm.displayHex(5, 5);
  tm.displayHex(6, 6);
  tm.displayHex(7, 7);
  delay(2000);

  tm.reset();
  tm.displayHex(0, 8);
  tm.displayHex(1, 9);
  tm.displayHex(2, 0x0A);
  tm.displayHex(3, 0x0B);
  tm.displayHex(4, 0x0C);
  tm.displayHex(5, 0x0D);
  tm.displayHex(6, 0x0E);
  tm.displayHex(7, 0x0F);
  delay(2000);
}
```

8. ESP-32 Add GY-302 (BH1750) Library

- https://randomnerdtutorials.com/esp32-bh1750-ambient-light-sensor/

BH1750

by **Christopher Laws** Version **1.3.0 INSTALLED**

Arduino library for the digital light sensor breakout boards containing the BH1750FVI IC Pretty simple and robust BH1750 libr
ESP8266 & ESP32 compatible.
More info

BH1750 by Christopher Laws Version 1.3.0

```
#include <Wire.h>
#include <BH1750.h>

BH1750 lightMeter;

void setup() {
  Serial.begin(115200);
  Wire.begin();
  lightMeter.begin();
  Serial.println(F("BH1750 Test begin"));
}

void loop() {
  float lux = lightMeter.readLightLevel();
  Serial.print("Light: ");
  Serial.print(lux);
  Serial.println(" lx");
  delay(1000);
}
```

COM4

```
Light: 1417.50 lx
Light: 219.17 lx
Light: 99.17 lx
Light: 102.50 lx
Light: 106.67 lx
Light: 109.17 lx
Light: 109.17 lx
```
